

# How can we best protect Australian children?

Anglicare Conference, Sydney  
September 2017

## Summary

---

### The need for a new Child Protection solution in Australia

- ▶ In the last four years, child protection cases in the country have risen by 20%
- ▶ In 2015-16, 8.5 per 1000 children were subject to abuse substantiation, which is an increase from 7.4 in 2011-12
- ▶ Of all notifications, emotional abuse is the most common type of child maltreatment, followed by neglect, physical abuse and sexual abuse
- ▶ Of all states, Northern Territory receives by far the highest rate of child protection services, followed by New South Wales, Victoria, Australian Capital Territory and Tasmania
- ▶ Despite, increasing government expenditure on child protection services, the cost of prevention and longer term implications of child abuse and neglect is considerably higher

### Key challenges within the system

- ▶ Australian and State governments struggle to tackle some key issues within the system: data collection and consistency issues; increasing cost of child protection; lack of quality out-of-home care services; lack of early intervention services; silos between government departments, agencies and practitioners; shortage of skilled workforce; overall system failures; and lack of interagency cooperation

### Current case management systems

- ▶ All the states and territory governments already have a case management system aimed at strengthening outcomes for children through an integrated and co-ordinated service delivery between Health services and interagency partners. However, some are looking to redesign or replace their existing system.

## Child Protection issues are regularly hitting the headlines in Australia, with growing calls for system reform

## There are several risk factors for vulnerable children including poverty, mental health or addiction problems, and domestic violence

Knowledge of risk factors for child maltreatment can help identify children at risk and may represent opportunities for prevention.

### Economic disadvantage and social exclusion

- ▶ Recent academic research shows an estimated 27.3% of child maltreatment was attributable to economic factors (with poverty and parental unemployment the strongest determinants)
- ▶ According to a CRC25 Australian Child Rights Progress Report, nearly 18% of children currently live in poverty in Australia. There is a strong correlation between families' socio-economic circumstances and prevalence of child abuse.

### Parental substance abuse

- ▶ Parental alcohol and substance abuse are commonly associated with child protection issues
- ▶ A recent survey of Australian adults shows: 78% of respondents believe Australia has a problem with excess drinking or alcohol abuse; 92% of respondents believe that alcohol is linked to family and domestic violence; 21% of parents or guardians surveyed reported that their child has been harmed or put at risk of harm because of someone else's drinking.

### Disabilities and mental health

- ▶ Children of parents with a disability (particularly intellectual and psychosocial disability) are subject to removal from their parents at a higher rate than the general population. Children of parents with mental health problems are at greater risk of developing mental health problems of their own
- ▶ Furthermore, children and young people with disability experience violence and abuse at approximately three times the rate of children without a disability

### Domestic violence

- ▶ Children exposed to family violence are classified as experiencing 'emotional abuse' - the most commonly substantiated type of harm (39%) in child protection notifications across Australia.
- ▶ Police across Australia dealt with 239,846 domestic violence incidents in 2015
- ▶ Domestic violence puts children at high risk of experiencing physical abuse themselves, with rates of co-occurrence ranging from 45% to 70%.

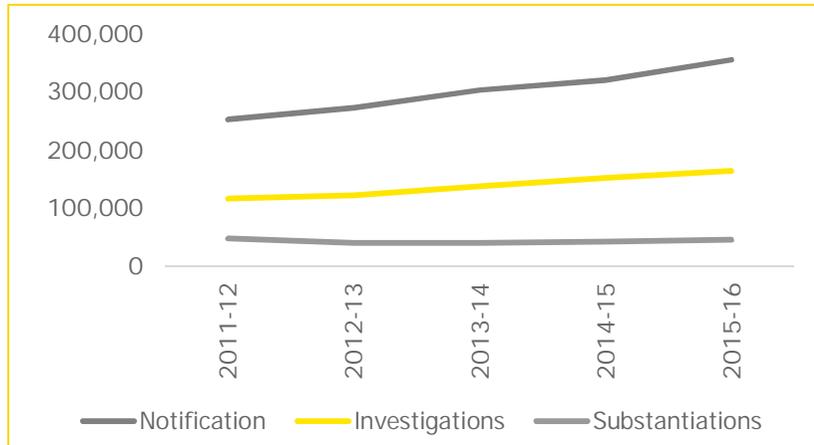

### Family breakdown

- ▶ Family breakdown, isolation and lack of support is a key risk factor when there is no one (extended family, friends, a partner or community support) to help with the demands of parenting
- ▶ In 2015, there were 48,517 divorces granted in Australia, an increase of 4.3% on 2014; divorces involving children represented almost half of all divorces granted. The number of children involved in divorces totalled 42,303 in 2015,

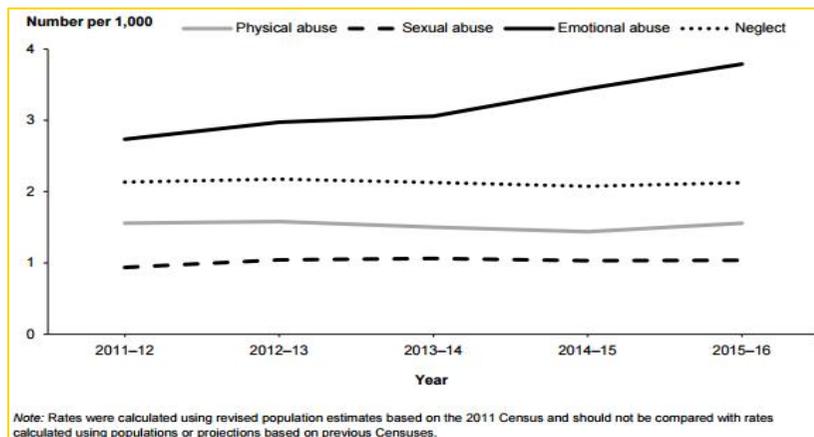

## Number of notifications and substantiations have risen over the past few years with emotional abuse accounting for most of the abuses

Number of notifications, investigations and substantiations

- ▶ The rate of children who were subject of notifications rose steadily from 34.0 per 1,000 children in 2010-11 to 42.0 per 1,000 in 2015-16, reflecting an increased focus on providing statutory responses to those who need intervention and protection.
- ▶ In 2015-16, 45,714 children were the subject of a substantiation, equating to 8.5 per 1000 children and an increase from 7.4 in 2011-12 reflecting impact of legislative changes, public awareness and inquiries into child protection processes.

Children who were the subject of child protection substantiations, by abuse type

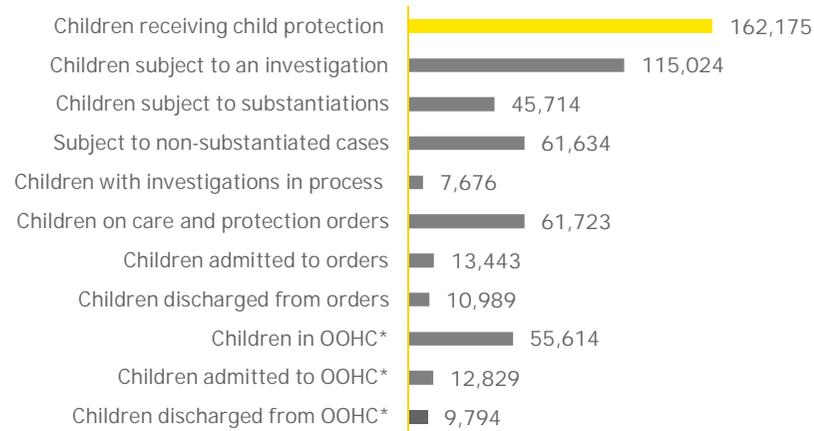

- ▶ Of all notifications, emotional abuse was the most common type of child maltreatment during 2015-16 (45% of all substantiations), followed by neglect (25%), physical abuse (18%) and sexual abuse (12%).
- ▶ Rates of emotional abuse have shown the greatest increase of all types of abuse or neglect (from 2.7 to 3.8 per 1,000 children) during 2010-11 to 2015-16.
- ▶ Other types of abuse have remained fairly stable for six years from 2010-11 to 2015-16.

# The number of children receiving child protection services has increased by 20% between 2012-13 and 2015-16...

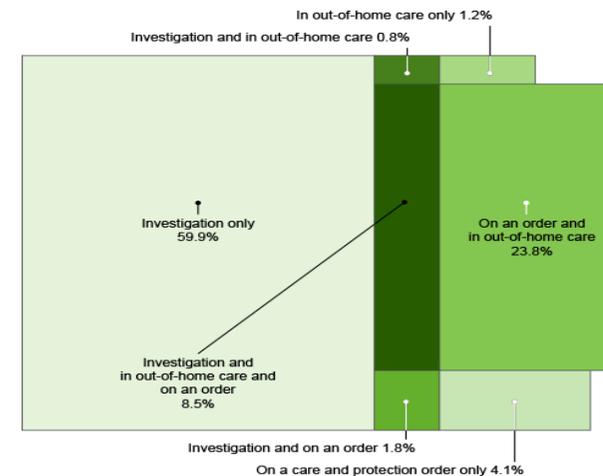

## Children receiving child protection services in Australia during 2015-16

- ▶ Over the last 5 years, the rate of children in substantiations, on care and protection orders and in out-of-home care have all increased steadily.
- ▶ In 2015-16, one in 33 children received child protection services, of which nearly 73% were repeat clients.
- ▶ Of children receiving child protection services in 2015-16, 21.4 per 1,000 were subject to investigation, 11.5 per 1,000 were on a care and protection order and 10.4 per 1,000 were in out-of-home care.

## Children receiving child protection services by components of service received, 2015-16

- ▶ 60% of children receiving child protection services were the subject of an investigation only.
- ▶ Almost a quarter of children (24%) were both on an order and in out-of-home care.
- ▶ Nearly 9% of children were involved in all three components of the system.

Note: \*OOHC denotes out-of-home care

## ...with increase being steady in New South Wales, Victoria and the Northern Territory

Children receiving child protection services by states and territories (number per 1,000)

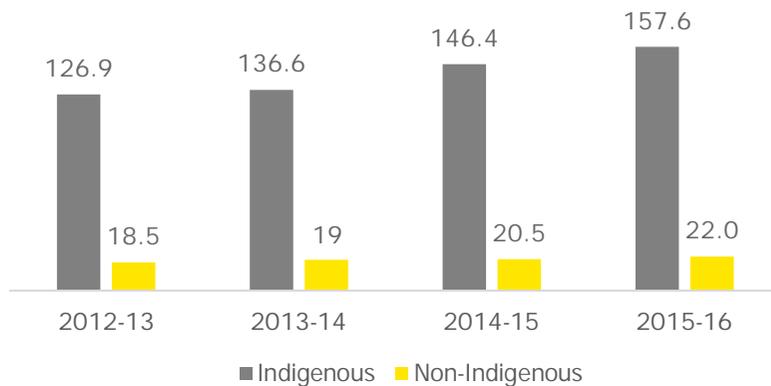

State/Territory	2012-13	2013-14	2014-15	2015-16
Australian Capital Territory (ACT)	26.7	19.3	19.8	27.3
New South Wales (NSW)	29.1	31.7	35.0	37.6
Northern Territory (NT)	61.3	71.3	91.5	96.1
Queensland (QLD)	27.6	26.6	24.2	24.6
South Australia (SA)	17.9	19.8	17.6	17.2
Tasmania (TAS)	25.5	22.7	22.4	22.7
Victoria (VIC)	21.8	22.9	26.0	28.6
Western Australia (WA)	24.0	26.5	27.0	25.8
Australia (Total)	26.0	27.2	28.6	30.2

- ▶ The rate of children receiving child protection services in 2015-16 varied across jurisdictions, but with a total average across Australia of 30.2 per 1000 children
- ▶ NT had by far the highest rate of child protection services with 96.1 per 1000 children in 2015-16, due to increased cases of child abuse or neglect.
- ▶ Since 2012-13, rates have increased steadily in NSW, Victoria and the NT, while other jurisdictions showed a fluctuating trend over the four-year period.
- ▶ In the latest year, rates rose in all states with the exception of WA and SA.

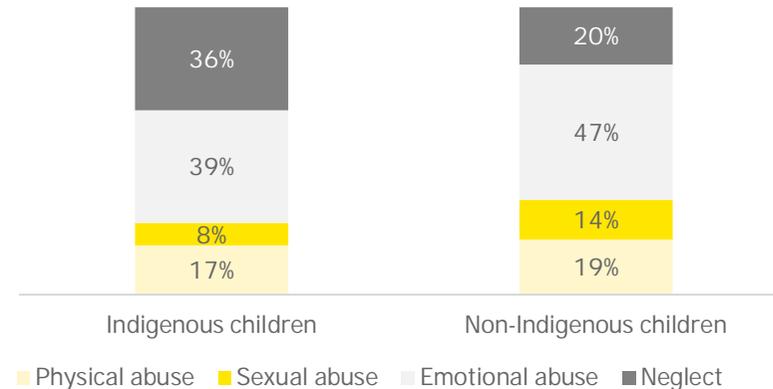

# Indigenous children are seven times more likely to have received child protection services than non-Indigenous children

Children receiving child protection services by community, (number per 1000)

Breakdown of substantiated maltreatment types by community, 2015-16

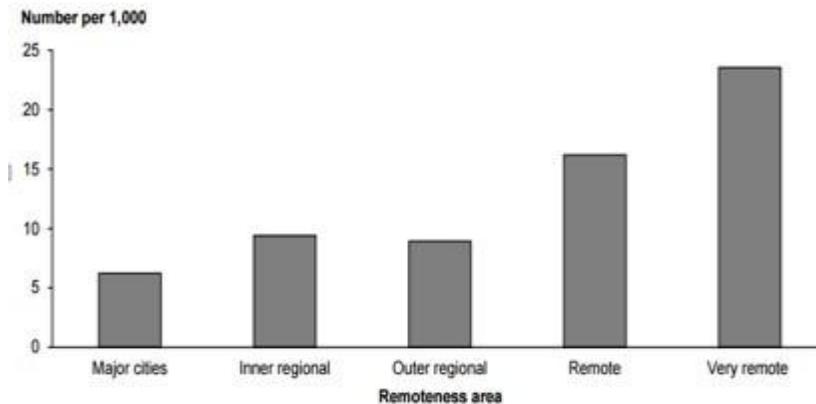

- ▶ Over the past four years, the rate of children receiving child protection services has increased for both Indigenous and non-Indigenous children—from 126.9 to 157.6 per 1,000 and from 18.5 to 22.0 per 1,000, respectively.
- ▶ In 2015-16, 46,632 indigenous children received child protection services in general or were subjects of substantiated abuse or neglect, seven times more than non-indigenous children, and an increase of 8% over the last four years (36,656 indigenous children in 2012-13).
- ▶ On an average, indigenous children who received child protection services were slightly younger than non-indigenous children, with median ages of 7 and 8, respectively.

- ▶ The rate of indigenous child abuse has increased over the past few years with the rate of substantiation seven times higher compared to non-Indigenous children.
  - § Total substantiations for indigenous children was 12,903 in 2015-16, an increase of 5.5% compared to 2012-13.
- ▶ Emotional abuse was the most common form of abuse for substantiated maltreatment of non-Indigenous children (47%), compared to 39% for indigenous children.
- ▶ Neglect formed over one-third of substantiated abuse among indigenous children in 2015-16, compared to only one-fifth for non-Indigenous children.

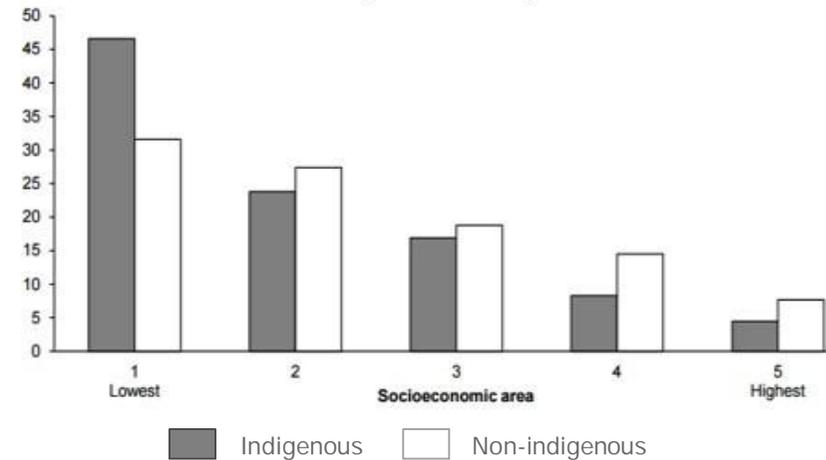

## Children in remote areas and the lowest socio-economic areas are more likely to be the subject of substantiations

Children subject to substantiations by remoteness area, 2015-16 (rate per 1,000)

Children subject to substantiations, by socioeconomic area and indigenous status, 2015-16 (%)

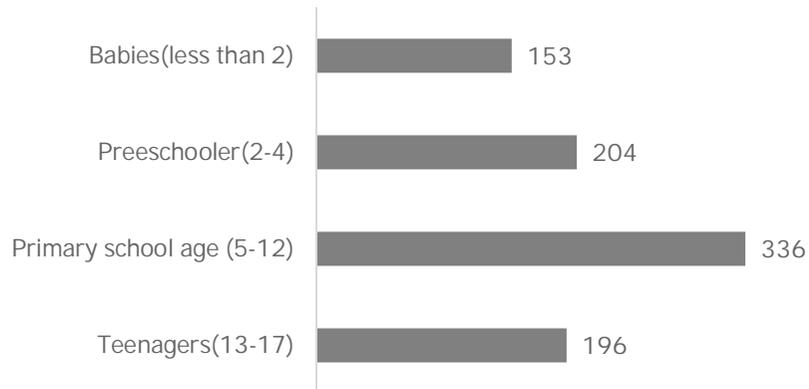

- ▶ There is lack of proper services and programs in remote communities to address the wellbeing and concerns of children and young people.
  - § Children from geographically remote areas were four times more likely than those in major cities to be the subject of a substantiation (23.5 per 1,000 compared with 6.2 respectively)
  - § Significant numbers of indigenous children in very remote areas are experiencing issues such as inadequate housing, poor nutrition, grief and loss, trauma, alcohol and substance abuse and violence.
- ▶ Children who were subject to substantiations were also more likely to come from the lowest socioeconomic areas (36% in the lowest socioeconomic area compared with 7% in the highest).
  - § Indigenous children are far more likely to be from the lowest socioeconomic areas i.e. 47%, compared with 32% for non-Indigenous children.

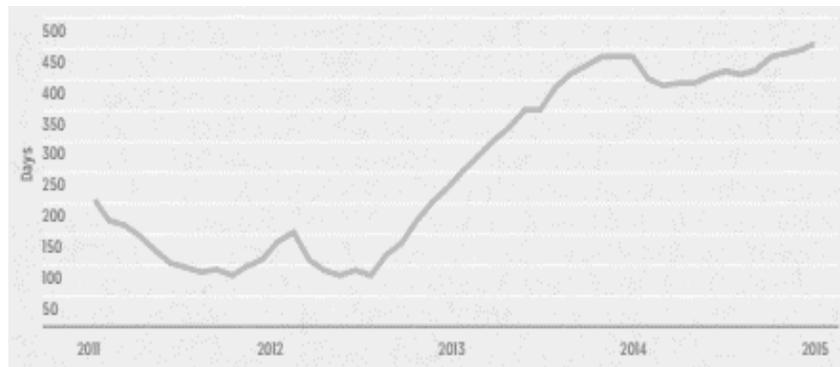

## Children suffering immigration detention face serious issues such as self harm and sexual assaults

Age of children in detention by age, 2014

Average number of days held in immigration detention facilities

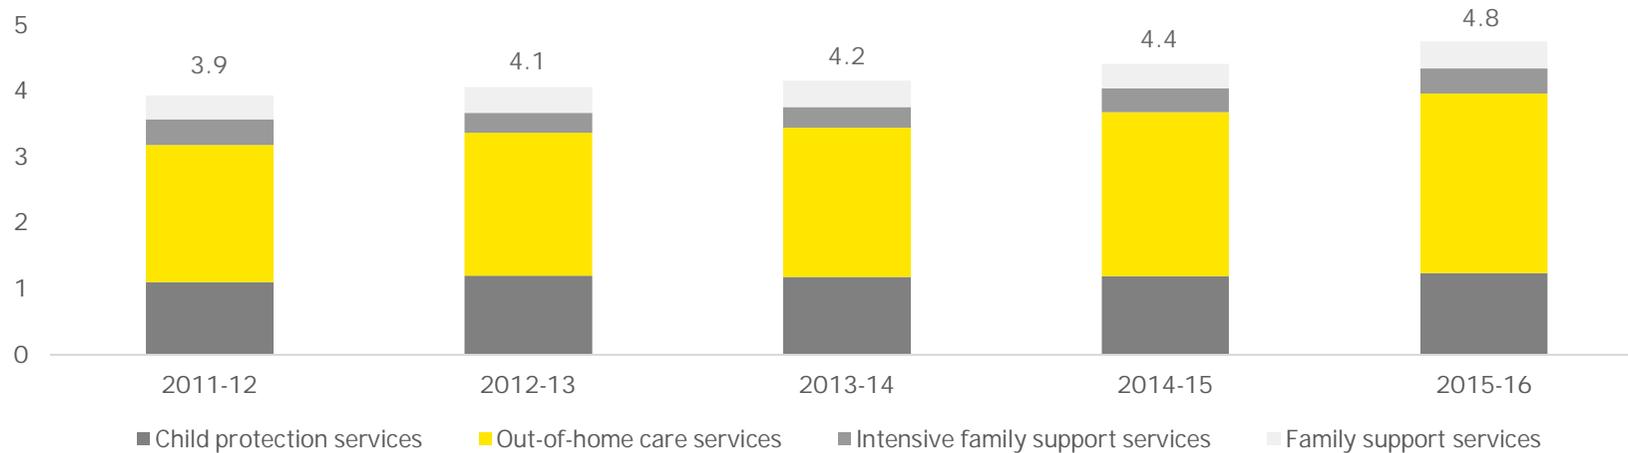

- ▶ According to the Department of Immigration and the Parliamentary Library, there were 1,773 child detentions at the end of August 2013.
- ▶ According to Human Rights and Equal Opportunity Commission (HREOC), as of 31 March 2014, the majority of children in detention were primary-school aged, followed by preschool aged children and teenagers.
- ▶ The commission's inquiry report identified assaults and self-harm incidents in the detention centres from January 2013 to March 2014. These incidents include:
  - § 233 assaults involving children
  - § 207 incidents of actual self-harm
  - § 436 incidents of threatened self-harm
  - § 33 incidents of reported sexual assault
- ▶ As at 31 January 2016, the average time spent by children in detention facilities was 457 days, causing prolonged deterioration of mental and emotional health, and an adverse impact on development.
- ▶ As of June 2015, indigenous children were 26 times more likely to be in juvenile detention, due to over-reliance on criminal justice approaches for resolving issues.
- ▶ In response to the immigration detention issue, the country has an obligation under the 'Convention on the Rights of the Child' to ensure alternative care, special protection and assistance for asylum seekers and unaccompanied children.

Government expenditure on child protection, out-of-home care, family support and intensive family support services has increased at a CAGR of 2% from 2011-12 to 2015-16...

Government real recurrent expenditure by type of service (A\$ million)

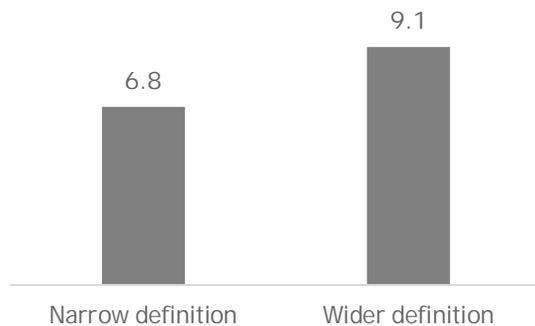

- ▶ The government contributes directly to child abuse prevention through its child protection budget and programs funded by the Australian Government Department of Social Services (DSS).
- ▶ For 2015-16, respective governments allocated A\$4.8 billion to child protection, out-of-home care, family support and intensive family support services an increase of 7.7% (A\$341.2 million) year-on-year.
- ▶ Real expenditure per child rose from A\$765.93 in 2011-12 to A\$883.09 in 2015/16.
- ▶ Of all the categories, out-of-home care services accounted for the majority of expenditure (57%), followed by child protection services (26%), Family support services (9%), Intensive family support services (8%).
- ▶ By state, NSW accounts for the largest share of expenditure (32%), followed by Victoria, Queensland, WA, SA, NT, Tasmania and ACT.

...but the costs of prevention and longer term implications of child abuse and neglect is considerably higher

According to Pegasus Economics' conservative estimates, the economic burden of child abuse costs A\$6.8 billion to the Federal, State and Territory Governments in Australia. Considering the broader definition of childhood trauma, the economic cost may be as high as A\$9.1 billion.

Cost of child abuse (NZ Billion)

Note: Narrow definition includes child sexual, emotional and physical abuse only; while, Wider (ASCA) definition includes all childhood trauma

Weighted average cost to the budget from childhood trauma

Type of issue	Annual cost per person (A\$)	Number of child abuse victims	Weight	Weighted annual cost per person (A\$)
Depression (mental illness)	7,687	3,516,700	0.43	3,304.87
Eating disorder (obesity)	6,042	2,400,000	0.29	1,772.76
Suicide and attempted suicide	5,281	2,614	0.00	3.64
Alcohol abuse	4,984	2,260,000	0.28	1,377.03
<b>Average</b>	<b>7,525</b>			<b>6,458</b>

- ▶ The actual cost of child abuse and trauma overruns is considerably higher than the A\$4.8 billion spent on child protection, reflecting the huge costs of prevention and long-term implications (including additional costs to society stemming from educational failures, premature death and low workforce participation, which may reduce the productive potential of society and lead to lower GDP).
- ▶ Pegasus Economics estimated that the impact of child abuse (sexual, emotional and physical) on an estimated 3.7 million adults is at least \$6.8 billion annually. In the population of adult survivors of childhood trauma more broadly (i.e. a figure of 5 million adults) this estimate rises to \$9.1 billion.
- ▶ Pegasus concluded that four cost categories - alcohol abuse, anxiety/depression, obesity and suicide/attempted suicide - were representative (yet conservative) of the budgetary costs flowing from childhood trauma.

## Federal and State governments needs to tackle a number of key challenges to improve the overall system

<p>Data collection and consistency issues</p>	<ul style="list-style-type: none"> <li>▶ There is insufficient data on child-abuse and the under-reporting of crime, especially by Aboriginal and Torres Strait Islander communities; children from culturally and linguistically diverse backgrounds (CALD); children with disability; and LGBT due to fear and neglect.</li> <li>▶ The data collected about both the incident and the individuals involved is not uniform across states and territories.</li> </ul>
<p>Increasing cost of child protection</p>	<ul style="list-style-type: none"> <li>▶ The cost of child protection in Australia is as high as A\$6.8 billion annually or A\$6,458 per person, which includes high government expenditure and loss of tax revenues.</li> <li>▶ Resultantly, federal, state and territory governments are initiating revenue measures and expenditure cuts to restore the budget position.</li> </ul>
<p>Lack of quality out-of-home care services</p>	<ul style="list-style-type: none"> <li>▶ The number of children in out-of-home care has increased by 17% in 2015-16 y-o-y; however, the quality of services like health, safety, culture and community, emotional development and learning and achieving is lacking in out-of-home care.</li> </ul>
<p>Lack of early intervention services</p>	<ul style="list-style-type: none"> <li>▶ Practitioners fail to record, share, understand and take action on matters of child abuse in a timely manner, leading to delayed response times.</li> <li>▶ Children's experience of domestic and family violence is not collected independently of the adult's experience.</li> </ul>
<p>Boundaries between government departments, agencies and practitioners</p>	<ul style="list-style-type: none"> <li>▶ Silos exist between state governments, departments, practitioners &amp; NGOs across Australia which are not working in tandem and are looking to transition to a sustainable service system.</li> <li>▶ There is a need to ensure that service providers are accountable for a consistent set of standards to drive improvements and have responsibility for reporting on child and family outcomes.</li> </ul>
<p>Shortage of skilled workforce</p>	<ul style="list-style-type: none"> <li>▶ Recruiting and retaining a skilled workforce (including reviewing organisational structures, operating models, job design, specialist roles and supporting staff) is difficult</li> <li>▶ Child protection agencies face a challenge in providing staff with the tools necessary to perform their respective roles (e.g., information systems).</li> </ul>

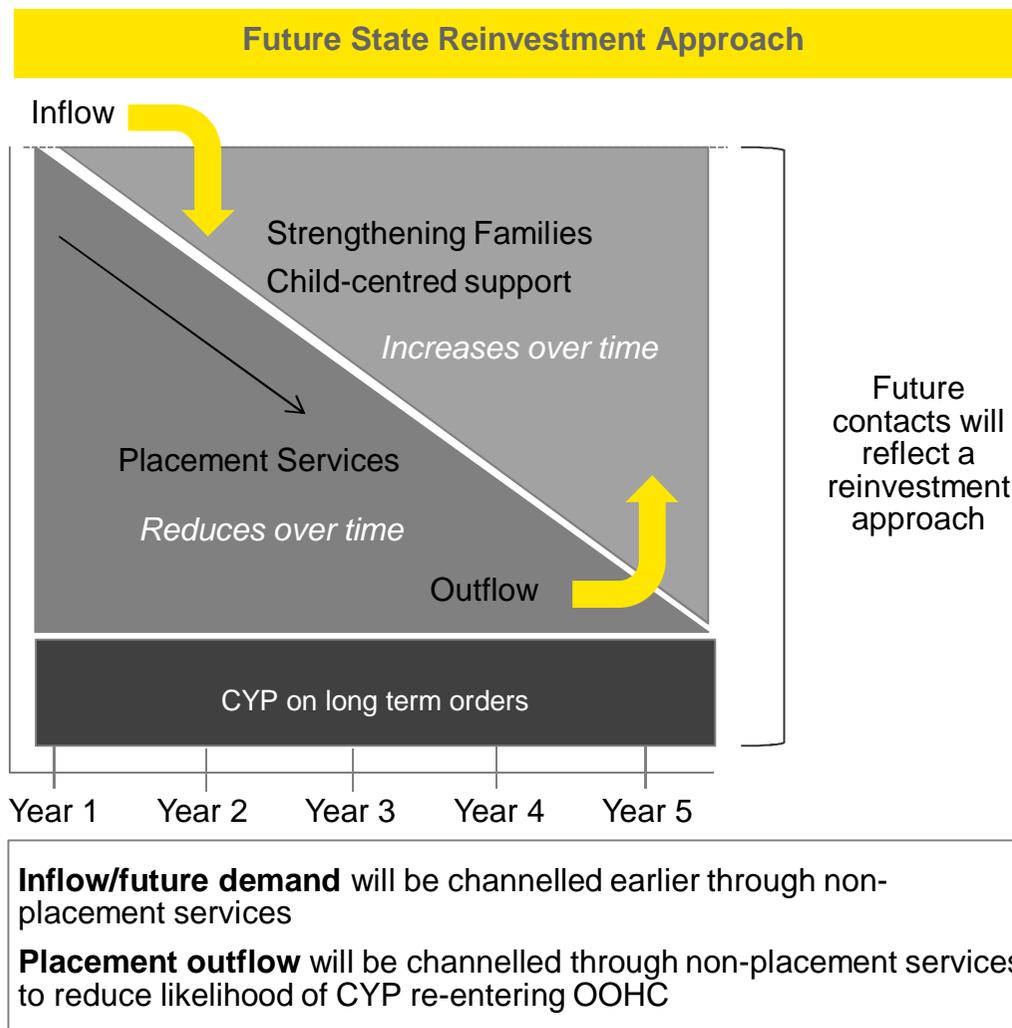

# A New Response is Required – OOHC

# Diversion, Permanency & Reducing Placement

The focus of the future service system is for:

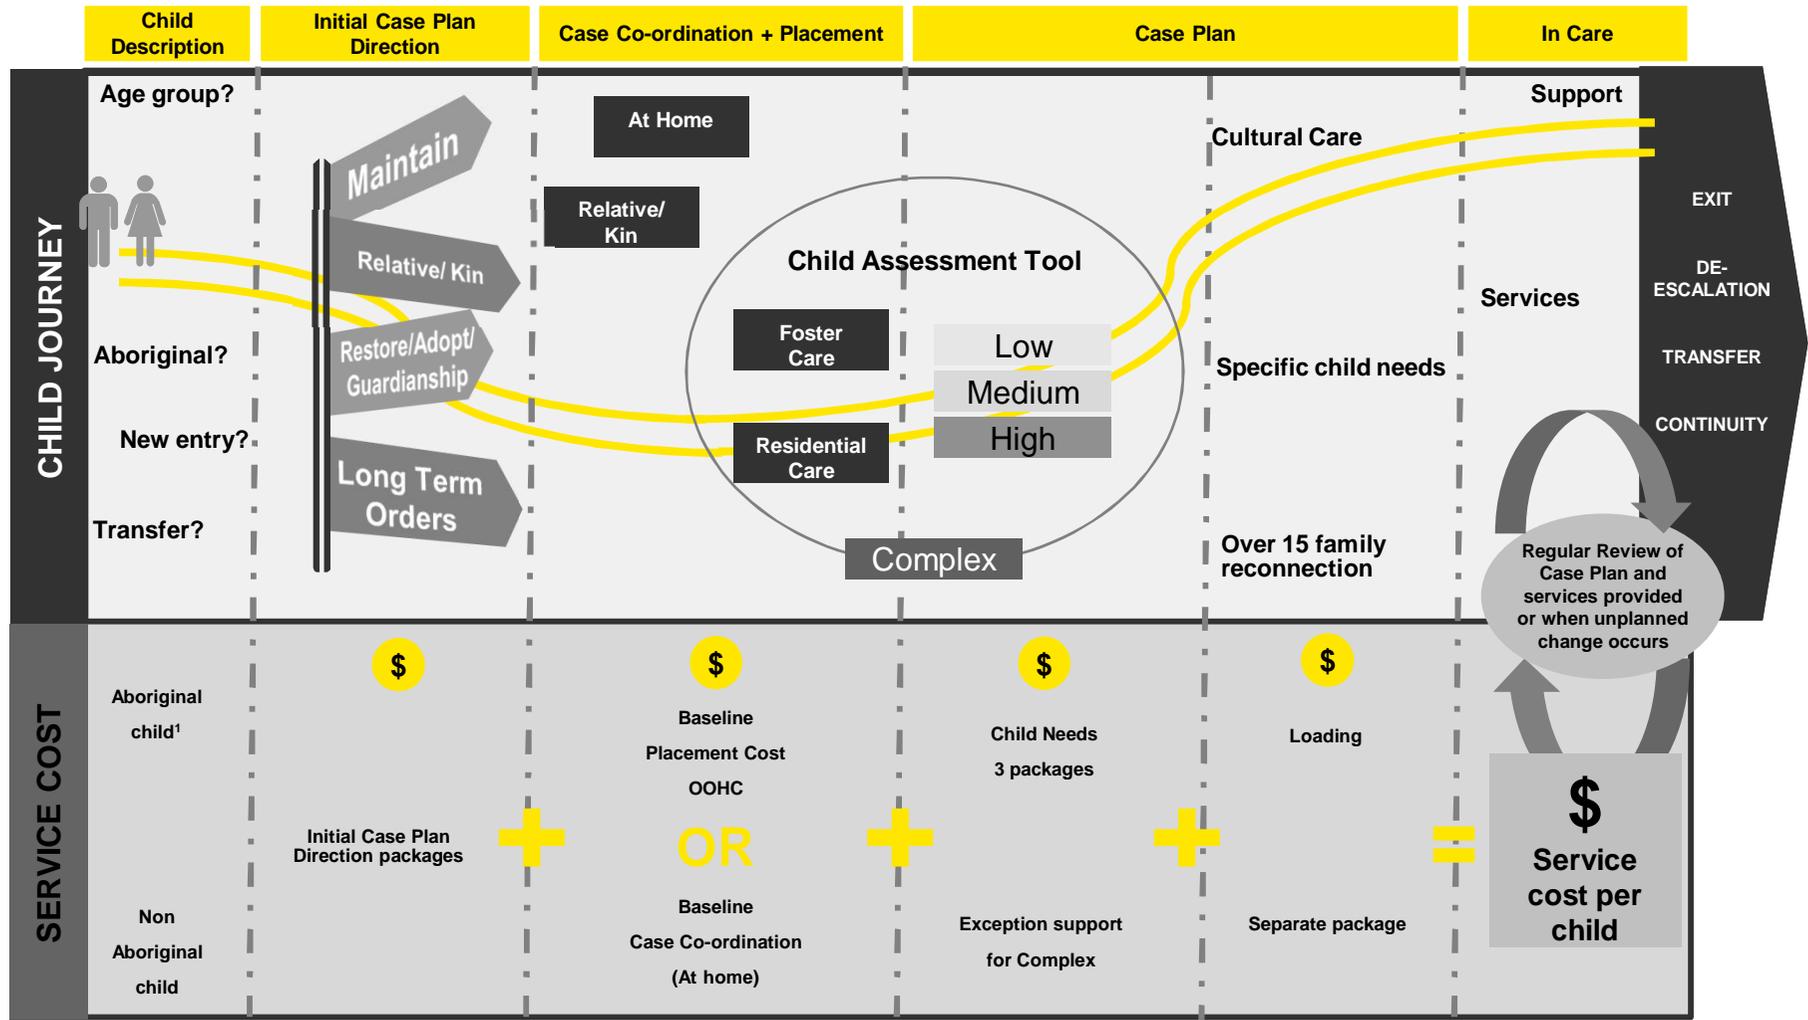

- Early intervention through strengthening families
- Focussing on child centred supports
- Reducing placement services over time
